DIGITAL CAPACITANCE METER
OPERATION MANUAL

1. FEATURES
- Easy and correct readout.
- High measuring accuracy.
- Measurements are possible even under a strong magnetic field.
- LSI-circuit provides high reliability and durability.
- Input overload protection is provided.
- LCD display for low power consumption and clear readout even in bright ambient light conditions.
- In-line pushbuttons allow one hand operation.
- Light-weight and compact construction for easy operation.
- Low battery condition is indicated on the LCD display.

2. SPECIFICATIONS

2-1. GENERAL SPECIFICATIONS
- Display: LCD (Liquid Crystal Display) Max. display 1999.
- Range: 9 range, whole range value (from 0.1pF to 20mF)
- Overload protection: Display “1”.
- Calibrate Adjustment: Have two internal adjustment. One is panel Zero adjustment.
- Zero Adjustment: Manual (range:±20pF)
- Over-range display: Display “1”.
- Sampling Time: <5 second
- Operating Temp: 0℃ to 40℃
- Operating Humidity: 80% MAX. R.H.
- Battery: 6V (6F22 or the equivalent)
- Battery Life: alkaline battery: approx.200 hours.

Typical consumption current: 3~4mA (RANGE: 200pF-200μF)
Standard Accessories: Test alligator clips (red & black)...1 pair.
Instruction manual………………..1 pc.

2-2. ELECTRICAL SPECIFICATION
- Accuracy is ±(percentage of reading + number of digit) at 23±5℃, <80%RH.

Temperature range for the accuracy guaranteed: 23±5℃
Accuracy: range at 200pF~200μF: ±0.5%±1 digit;
rang at 2000μF: ±2%±1 digit; range at 20mF: ±2%±2 digit

Excite voltage: 2.8V peak value

Overload protection: Protected by a 0.2A/250V self-fused. The capacitance will destroy the meter if the DCV is higher than 60V.
Zero adjust: limit to 20pF

3. OPERATION

3-1. Display values: (see the fig.1)
- 3-1-1. LCD display the measuring value, unit and low battery indication;
- 3-1-2. POWER switch: turn on/off the power.
- 3-1-3. Zero adjust knob: zero adjust knob before the measuring of lower than 20nF range
- 3-1-4. Function knob: to select measuring range.
- 3-1-5. Input COM: Capacity (Cx) COM
- 3-1-6. Battery case

3-2. Notice before measuring:
- 3-2-1. Observe polarity when connecting polarized capacitors.
- 3-2-2. Discharge completely for any capacitance;
- 3-2-3. Do not connect any COM with voltage source absolutely, otherwise it will cause damage badly.
- 3-2-4. Do not close (black & red) test leads.
- 3-2-5. Before removing the battery and fuse compartment cover, ensure that the instrument is disconnected with any circuit and the power switch is in the off position.
- 3-2-6. zero adjust won’t work when using the external components alligators if the capacitance is beyond 20nF.

3-3. CAPACITANCE(C) MEASURING PROCEDURE

(a) If the capacitance value is unmarked, start with the 200pF range and keep increasing until the over-range indication goes off and a reading is obtained.
(b) A shortened capacitor will read over-range on all ranges. A capacitance with low voltage leakage will read over range, or a much higher value than normal.
(c) Measure of very low capacitance should be performed using extremely short leads in order to avoid introducing any stray inductance.
(d) When using the optioned test leads, remember that the leads introduce a measurable capacitance to the measurement. As a first approximation, the test

lead capacitance may be measured by opening the leads at the trips, recording the open circuit value and subtracting that value.
(e) Capacitors, especially electrolytic, often have notoriously wide tolerances. Do not be surprised if the measured value is greater than the value marked on the capacitor, unless it is a close tolerance type. However, value is seldom drastically below the rated value.
(f) If changing range, measured value will be changed; leakage-voltage capacitors will be checked also. Leakage-resistance will be decreased in lower range.

3-4. AUTO POWER OFF

The meter will be into sleeping mode when it stopped work for 20minutes. Please restart the power if you need to continue to measure.

3-5. MAINTENANCE

Do not try to modify the electric circuit.

3-5-1. Keep the meter away from water, dust and shock.
3-5-2. Do not store and operate the meter under the condition of high temperature, high humidity, combustible, explosive and strong magnetic place.
3-5-3. Wipe the case with a damp cloth and detergent, do not use abrasives and alcohol.
3-5-4. If do not operate for a long time, should take out the battery to avoid leakage cause damage badly.
3-5-5. Take off the holster. (see fig. 2)
3-5-5-1. Take off the holster. (see fig. 2)
3-5-5-2 Unlock the screw and remove the battery case.
3-5-5-3. Take out the old battery and replace the new one. It's better to use alkaline battery for longer life
3-5-5-4. Fit on the battery case and lock the screw.
3-5-5-5. Take off the holster as the opposite way (see fig.2)

3-5-6. Battery Life: approx.200 hours.

Zinc-Carbon battery approx. 100 hours

In-line pushbuttons allow one hand operation.

Typical consumption current: 3~4mA (RANGE: 200pF-200μF)
